

Compliance & Governance

That frees business

Red tape, high regulation, operational upheaval: compliance can be disruptive for businesses – and at the same time the levels of governance required to safeguard reputation and advantage can prove restrictive.

bluesource compliance and governance solutions help organisations better manage information and the processes to use that information, more efficiently and securely. So compliance becomes less complex and governance becomes easier – enabling business to focus on business.

Bring more confidence and control to compliance and governance

Businesses are under more and more pressure to meet greater regulatory demands and maintain ever-higher standards. With ever growing data, the new information age is making it even harder. Organisations must demonstrate control, with strong governance and faultless compliance. Failure results in time intensive investigations, information searches and potentially fines.

bluesource helps organisations more tightly control compliance and governance, by better managing information and the processes to use it by their people. High impact business risk is minimised. There's greater visibility, better search and eDiscovery capability, resulting in improved efficiency and security.

The benefits

- Reduce the time and cost of meeting regulatory and legal demands
- Simplify and better control the provision of the right information, and minimise the threat of fines
- Increase the visibility of information as it flows through the organisation, and make routine checking and auditing simpler
- Preserve and access only the right information by using the right archiving and search tools
- Safeguard critical information with staged protection levels and tracking monitors, so access control is better
- Enable highly targeted, customised searches. Deliver easy to use search reports, so the information that's needed is identified more quickly and more simply
- More instantly respond to legal claims or data preservation orders, reducing the upheaval, cost and reaction time to eDiscovery
- Maintain chain of custody of business critical data as it is migrated between platforms

A range of solutions that increase security and maximise efficiency

Powerful Search

At a glance

- Identify necessary information quickly and easily
- Track information that requires further review or on-going monitoring
- Customise searches and sampling to specific legal and compliance team needs
- Easy to use search reports to quickly and easily review findings
- Audit controls as reports and activities are automatically tracked

eDiscovery

At a glance

- Reduced upheaval, cost and reaction time responding to eDiscovery triggers
- Quickly and accurately respond to audits, legal claims or data preservation orders
- More effectively evaluate claims, that don't sacrifice productivity and follow EDRM
- Legally defensible eDiscovery process that withstands court scrutiny
- Lower legal service fees sending only what you need to outside counsel
- Be in control in a growing litigious environment, leveraging best practice technology, and saving money

Visibility

At a glance

- Provides visibility of information that moves between key workgroups and individuals so that it can be checked for regulatory compliance
- Apply an automated process to track information, enabling regular review by supervisors
- Provide audit trails for specific groups or individuals, simplifying regular review process for the owner or administrator

Access Control

At a glance

- Protect valuable information based on the required level of protection
- Set access levels and controls by categorising and tagging information
- Optimise stored information by selectively cleaning, retaining and identifying sensitive information
- Monitor and track who accesses information to identify misuse early

Preserving the right information

At a glance

- Optimise the information you archive by retaining only what's needed and deleting what isn't
- Includes emails and Files Systems, SharePoint, IM and social, and reduces the proliferation of PST files
- Reduce the amount of information you need to keep, and remove all duplicates
- Easier search and better access control

Data Migration

At a glance

- Transition information between archiving solutions and infrastructure and storage platforms
- Move and manage business critical data ensuring it remains compliant, chain of custody is preserved and errors are minimised
- Minimise the impact to the business and users, delivering a seamless user experience throughout the migration
- Free time to focus on other business critical projects
- Better plan the migration, avoid downtime and protect information

Discover the complete answer with bluesource

bluesource blends an extensive range of compliance solutions to the specific needs of every business, and optimises them on the preferred platform. We deliver on premises, in the cloud, or we can help you transition to the cloud with a hybrid model. Our people work with in-house IT teams, managing infrastructure

or providing a support service that boosts IT resources. We offer a range of service and support options that enable reactive or proactive support. All our services utilise the extensive skills of our service management centre, and our fully managed services provide financially backed SLA's.
